## Employment Impact

- Will most employees become obsolete?
- Innovation has always done this but AI takes it to a new level.
- There will undoubtedly be massive job losses, but also many new opportunities.
- Knowing how to leverage AI will be one of those opportunities.
- Example: software engineers => systems engineers
- People will be need to operate at a higher level of abstraction

"As an employee, you're not paid to 'know x', or 'write programs', you're paid to be useful." - Ian Miell

## Environmental Impact

- Carbon footprint of training one deep learning model same as the lifetime emission of 5 cars.
- Computation required to train the most advanced Al models doubles every 3.4 months.
- Globally, Al-related infrastructure consumes six times more water than Denmark.
- Chips that power Al require rare earth elements, mined in environmentally destructive ways.
